1 Overview.....	2
2 Design.....	2

## **1. Overview**

The DIDL Toolkit provides a generic API (DIDAPI), as well as implementations of varied complexity. The DIDAPI-impl package should provide a solid foundation for the development of XML-based DID implementations. The DIDAdore implementation package extends the DIDAPI-impl package, providing the content types and serializations used within the aDORe framework.

## **2. Design**
